EXAMINER'S AMENDMENT

1. Examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Attorney John E. Curtin, Registration No. 37,602 on December 9, 2009.

2. The application has been amended as follows:

Claims 4, 7, 11 and 14 have been canceled.

Claim 1 has been amended as follows:

A method for use in a node of an optical network, the method comprising the steps of:

receiving a connection request; and

assigning a link resource selected from link resources that have been released for connecting to a neighboring node by using at least one predefined sequence, that comprises ports and corresponding wavelengths within a node, to avoid contention resulting from the request,

wherein the at least one predefined sequence resulted from a negotiation with the neighboring node prior to receipt of the request,

wherein the link resources are selected from the group consisting of ports, wavelengths, SONET-based tributaries, SDH-based tributaries, and PDH-based tributaries.

Claim 6 has been amended as follows:

A method for use in a node of an optical network, the method comprising the steps of:

storing a table, wherein the table comprises resources associated with a link with an adjacent node; and

upon receipt of a connection request, selecting a link resource that has been released from the table for use in connecting to the adjacent node, wherein the selection is performed in accordance with a predefined selection sequence that comprises ports and corresponding wavelengths within a node to avoid contention associated with the request, and

wherein the predefined selection was previously negotiated with the adjacent node prior to receipt of the request,

wherein the link resources are selected from the group consisting of ports, wavelengths, SONET-based tributaries, SDH-based tributaries, and PDH-based tributaries.

Claim 8 has been amended as follows:

Apparatus for use in an optical network, the apparatus comprising:

a communications interface for use in negotiating a selection sequence, comprising ports and corresponding wavelengths within a node, with an adjacent node prior to receipt of a connection request; and

a processor, responsive to a connection request, for selecting a resource from link resources that have been released in accordance with the selection sequence for connecting to the adjacent node over a link to avoid contention associated with the request,

wherein the link resources are selected from the group consisting of ports, wavelengths, SONET-based tributaries, SDH-based tributaries, and PDH-based tributaries.

Claim 12 has been amended as follows:

A node of an optical network, comprising:

a memory means for storing a table, wherein the table comprises resources associated with a link with an adjacent node; and

a processing means for use in processing a connection request such that upon receipt of the connection request, the processing means selects a link resource from the table that has been released for use in connecting to the adjacent node, wherein the selection is performed in accordance with a predefined selection sequence comprising ports and corresponding wavelengths with a node to avoid contention associated with

the request, and wherein the predefined selection sequence was previously negotiated with the adjacent node prior to receipt of the request,

wherein the link resources are selected from the group consisting of ports, wavelengths, SONET-based tributaries, SDH-based tributaries, and PDH-based tributaries.

REASONS FOR ALLOWANCE

3. The following is an examiner's statement of reasons for allowance: the prior art made of record fails to teach or fairly suggests in combination a method and apparatus for use in an optical network, the apparatus comprising: a communications interface for use in negotiating a selection sequence, comprising ports and corresponding wavelengths within a node, with an adjacent node prior to receipt of a connection request; and a processor, responsive to a connection request, for selecting a resource from link resources that have been released in accordance with the selection sequence for connecting to the adjacent node over a link to avoid contention associated with the request, wherein the link resources are selected from the group consisting of ports, wavelengths, SONET-based tributaries, SDH-based tributaries, and PDH-based tributaries.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
